DETAILED ACTION

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kang (6,052,133) in view of Nally et al (5,748,968).

Kang teaches an integrated circuit device (Fig. 2, 111) for use in a computer system (Fig. 2) that includes a processing unit (116), a host bus (110) connected to the processing unit, an I/O bus (112), a peripheral device (123) connected to the I/O bus, a monitor (123), and a system memory (122), said IC device comprising a core controller (host interface 142 or 262) adapted to be connected to the host bus; a bus bridge (264) connected to said core controller and adapted to be connected to the I/O bus; a graphical controller (144) connected to said core controller and said bus bridge and adapted to be connected to the monitor; and a unified memory control unit (146) connected to said core controller and said graphical controller and adapted to be connected to the system memory. It is noted that Kang shows the multi-function controller 111 having two separate chips (Fig. 3, 114 and 120) which includes two host interfaces (142 and 262). However, Kang also suggests that the multi-function controller 111 can be a single chip or several chips (col. 3, lines 45-46). However, Kang fails to explicitly teach the unified memory controller

Application/Control Number: 09/199,478

Art Unit: 2671

unit including a graphical memory address/data path; a system memory address/data path; a centralized memory arbiter; and a unified memory controller. This is what Nally et al teaches. Nally et al teaches a graphical memory address/data path (connected to element 108); a system memory address/data path (connected to element 106); a centralized memory arbiter (110); and a unified memory controller (112). It would have been obvious to one of ordinary skill in the art at the time the present invention was made to combine the teachings of Nally et al into the system of Kang in order to more efficiently allocate the memory bandwidth requirements as taught by Nally et al (col. 2, lines 26-33). Therefore, at least claims 1 and 2 would have been obvious.

As per claim 3, the teachings of three separate and concurrently operable internal buses that connect said graphical controller and a respective one of said core controller, said bus bridge and said unified memory control unit would have been obvious by the teachings of single chip multi-function controller of Kang in order to concurrently communicate with each component.

As per claim 4, the combined system fails to explicitly teach said internal buses run at the same clock domain as the host bus. It would have been obvious to one of ordinary skill in the art at the time the present invention was made to provide the same clock domain for both internal buses and the host bus in order to synchronize the data transfer operations.

Double Patenting

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

Application/Control Number: 09/199,478

Art Unit: 2671

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground

application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

provided the conflicting application or patent is shown to be commonly owned with this

4. Claims 1-7 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-9 of copending Application No. 09/199,270. Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims would have been obvious to one of ordinary skill in the art at the time of invention.

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kee M Tung whose telephone number is 703-305-9660. The examiner can normally be reached on Tuesday - Friday from 6:30 am - 5:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mark Zimmerman can be reached on 703-305-9798. The fax phone numbers for the organization where this application or proceeding is assigned are 703-308-9051 for regular communications and 703-308-9051 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-305-4700.
